

**A non abrasive gently acting care system with a high potential of cleaning and a conservation agent showing an optimal compatibility regarding mucous membranes.**

### Conception

The "Solution R and Cleaner C" solutions fit perfectly together to provide cleaning care to contact lenses and maintain improved comfort when used.

### Cleaning C Contopharma

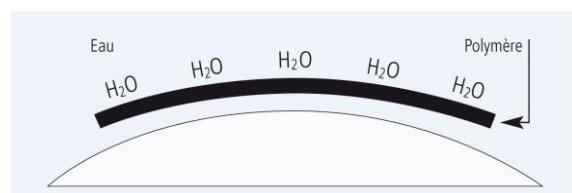

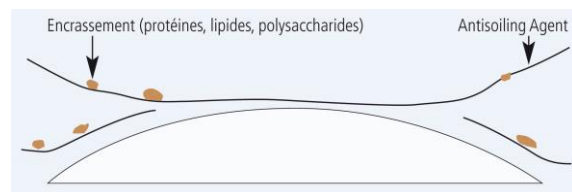

"Cleaning C" solution is the result of a long-lasting development<sup>1</sup> aimed at seeking a formula with a high cleaning capability, avoiding intense irritation in direct contact with the eye. The result is a non-destructive solution based on active lens cleaners. Contopharma's "C C" does not contain any odorant elements from heavy metals

### «Solution R» Contopharma

Contopharma's 'Solution R' is a rinse-off and maintenance solution designed for semi-rigid aerosol and hard contact lenses. It keeps the lens in its hydrated and isotonic state and prevents the growth of infectious micro-organisms without the mucus-compatible preservative being clustered on the surface of the contact lenses. ions (eye redness), GPC (giant papillarA particular composition of combined polymers (anti-grease) makes the surface of the contact lens hydrophilic, which improves ease of use, facilitates cleaning (anti-aliasing) and largely prevents the accumulation of various deposits. The risk of secondary

immunological reacy conjunctivitis) is thus reduced to a minimum.

### Further information

For lubrication we recommend CONTOPHARMA comfort solution. If the tear formation is low, the "drop&see" solution supports the cell function of the cornea by its balanced active ingredients. The optimised composition of the "lens&lid" solution protects the contact lens surfaces from contamination during wearing.
